

> Smart Workplace

The New Way of Working, with improved efficiency, lower costs and a pleasant working environment.

Flexible workplaces

> The way in which we work is becoming increasingly flexible. This is hardly surprising, considering how many studies reveal that by reducing the number of workplaces from 1 to 0.7 per person, companies can save tens of thousands of euros. In many countries, managers increasingly seize this opportunity to cut costs, however, such a switch to more flexibility is a complex process. Smart Workplace offers support before, during and after this transition, providing clear data and information. Simple, user friendly and effective.

Efficient office design

> An efficient office design is essential to a successful organization, and this also applies if your staff have assigned workplaces. Points to consider include: Do the various kinds of workplace (such as concentration areas, meeting rooms) meet staff demand? Is the

space in your office building used efficiently? Based on accurate monitoring, and thorough analyses, Smart Workplace will provide the answers to all these questions.

Unique information system in your building

> The satisfaction rates among staff and visitors to your office building improve the better informed they are. Your staff receives the most important information upon arrival, in the form of a Workplace Finder. This digital floor plan provides an up-to-date occupancy overview of all the workplaces. Your staff will be able to see at a glance where a workplace is available

for consultation or to work quietly. This information can also be accessed from a smartphone and workplaces can be reserved online. Visitors arriving for meetings or workshops immediately find all the relevant information about the current events from a digital Welcome Display.

Sensors

> Our small radio sensors enable you to monitor the occupancy of the different kinds of workplaces simply, anonymously and discreetly. The sensor information update the Office Signs and the Workplace Finders in real time. This makes it easy for staff to find a suitable workplace. The collected sensor information also enables dynamic facility management, as well as statistical analysis and reporting.

Adaptable, modular system

> Smart Workplace is a modular system. You only select the components you actually require. The system can easily be adapted at a later date, should your requirements change due to growth, reorganization or other changes.

Smart Workplace also integrates effortlessly with your existing systems. Our designers will ensure all components correspond perfectly with your corporate house style.

Who, what and where

> The Office Signs module with its digital room signs provides information on who is working at a particular workplace or in a particular room at any given moment. This information can be imported directly from your existing IT systems via an adapter. Office Signs also offers staff the possibility of displaying additional information for visitors, and of creating a personal look for their workplace using text or photos.

Management & Analysis

> Frequent changes in the occupancy of workplaces are processed quickly and easily with Smart Workplace. Your facility manager will also have an innovative resource management tool at their disposal. While incidental tallying generates inaccurate information, Smart Workplace registration is conti-

nuous and accurate. All registered data is made accessible in comprehensible analyses and reports. These will enable you to make well-founded decisions regarding the efficient use of your office building in the short, medium and long-term.

What Smart Workplace offers you
